Print Ether Overview

Sustainability & Immutability

Introduction

Sustainability and immutability are crucial concepts in the world of cryptocurrency. They ensure trust and stability for investors and users alike.

Immutability of Ether

- **Definition**: Immutability means that once data is recorded on the blockchain, it cannot be changed.
- **Launch Characteristics**: Ether is immutable upon launch, fostering trust among users and investors.

Current Sustainability Model

- **Trading Volume Mechanism**: The sustainability model is tied to trading volume, where a percentage is automatically redistributed to all holders.
- **Automatic Redistribution**: Every transaction impacts the total rewards for all holders, allowing users to see their token balances gradually increase without altering the total supply.

Taxes

Overview of Tax Structure

- **Tax Rate**: Print Ether has a set tax of **5%** for both buys and sells.

Breakdown of Tax Allocation

- **Redistribution to Holders**:
    - **4%** is allocated to redistributing tokens as staking rewards to all holders.

- **Operations and Marketing**:
  - **1%** is designated for operations and marketing efforts.

Viewing Current Rewards

- **Print Ether Dashboard**: Users can view overall rewards on the Print Ether dashboard at app.printether.com
- **Personal Rewards**: Each user can track their personal rewards through the dashboard.

Hold to Earn

How to Stake
- Staking requires executing transactions, but with the "Hold to Earn" mechanism, users automatically earn ETH tokens

Benefits of Hold to Earn vs. Staking

1. **Security**: Users retain full control over their tokens—"Not your keys, not your crypto."
2. **Immutability**: Operates on an immutable platform, requiring no trust in third parties.
3. **Liquidity**: No lockup period; users can hold their tokens as long as they want to earn.

Total Supply and Launch Information

Total Supply

- **Total Supply**: The total supply of Print Ether is **1,000,000** tokens.

Launch Details

- **Fair Launch**: Print Ether opts for a direct market launch, skipping the presale phase to offer equal initial access to all participants
- **Blockchain**: The only blockchain where Print Ether is launched is the **Ethereum Blockchain**.

Liquidity and Contract Security

- **Liquidity Lock**: All liquidity is locked, ensuring market stability.
- **Immutable Contract**: The contract is immutable, enhancing security and trustworthiness.

Auto Reward Distribution

Mechanism of Reward Distribution

- **Tax on Transactions**: Each buy or sell transaction incurs a tax
- **Automatic Event Trigger**: Once a certain amount of tokens accumulates within the contract, an event is triggered that automatically converts tokens to ETH. Then is distributed to each token holder.

Sustainability of the Model

- **No Minting for Rewards**: Print Ether does not mint new tokens to pay rewards.
- **Reward Dependency**: Rewards and annual percentage yield (APY) depend solely on the trading volume of Print Ether.

The Mission

- **Incorporating Other Tokens**: Our goal is to integrate additional tokens into our staking structure by offering a portion of the rewards.
- **Custom Pools**: We aim to create custom pools that combine PRINTR with respective tokens for diversified earning opportunities.
